AUREFASH

BRAND & DIGITAL STOREFRONT CONCEPT

A quieter *kind of* statement.

A considered fashion store concept

for modern everyday dressing.

PORTFOLIO CASE STUDY · 2026

AUREFASH / SPRING–SUMMER EDIT

01 / THE PROJECT

A considered place to shop.

AUREFASH is a premium fashion and lifestyle storefront concept built around the pieces people reach for most. The experience pairs a restrained editorial identity with familiar, practical shopping patterns: browse a collection, understand the product, choose a variation and review a clear bag.

PROJECT	ROLE	PLATFORM	STATUS
Fashion e-commerce	WordPress & WooCommerce developer	WordPress · WooCommerce	Portfolio concept / prototype

The brief

Create a distinctive, responsive fashion store with an ivory-and-obsidian visual language, a custom wordmark and a shopping flow that remains straightforward on mobile. The project is presented as a concept prototype; no live store, sales data, customer reviews or production payment service is claimed.

Design principles

PRINCIPLE	EXPERIENCE DECISION
01 Considered	A compact edit and visual hierarchy let the products lead.
02 Clear	Prices, product details and next steps stay easy to scan.
03 Comfortable	Generous spacing, calm color and responsive layouts support unhurried browsing.
04 Credible	Only verified business information belongs in a real launch.

02 / BRAND IDENTITY

A quiet signature.

The visual identity uses a refined uppercase wordmark and a custom AF monogram. A fine circular frame and champagne line give the monogram a distinctive stamp for the favicon, social avatar, and small brand touchpoints. The identity is intentionally legible in one color and at compact sizes.

Slate taupe
#68645E

Color with a clear job

COLOR	HEX	ROLE
Obsidian black	#171717	Navigation, typography, footer and primary actions
Warm ivory	#F5F1E8	Main canvas and editorial breathing room
Muted champagne gold	#B69A6A	Small marks, subtle emphasis and interactive hover
Soft stone	#E5E0D7	Borders, quiet surfaces and dividers
Slate taupe	#68645E	Secondary copy and product metadata
White	#FFFFFF	Product imagery surface and contrast

Type & imagery

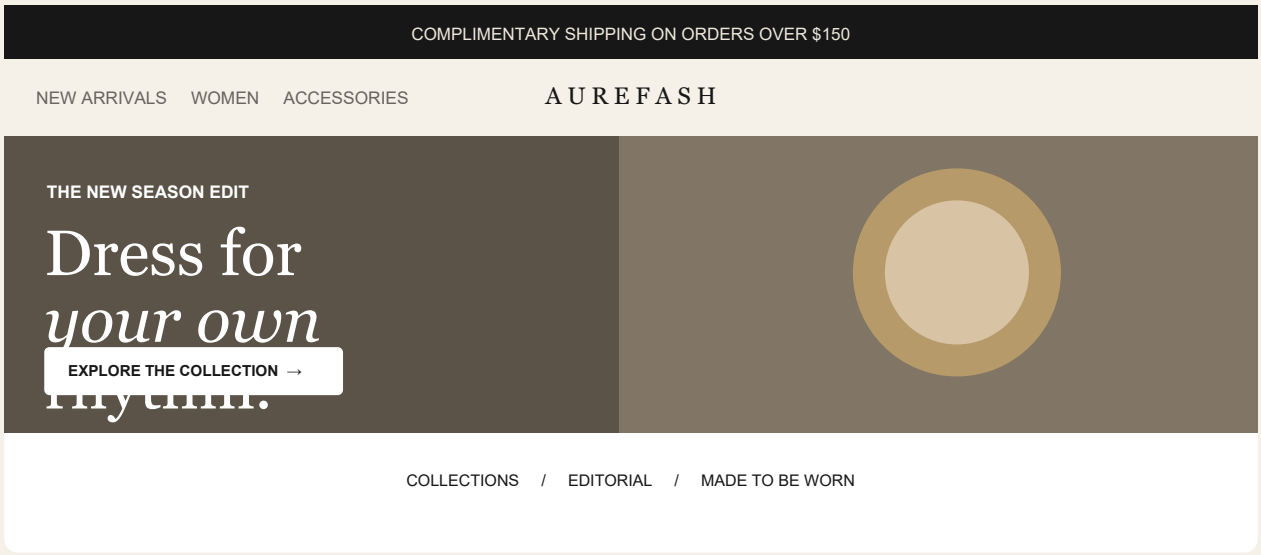

Playfair Display gives headings an editorial voice; DM Sans keeps navigation, controls and product details crisp. The photography direction favors natural light, tactile surfaces, neutral styling and a consistent crop. The prototype uses image references hosted by Unsplash; replace them with licensed, brand-approved product photography before a commercial launch.

Palette note: champagne is an accent and hover state, never the default primary button color. Keep large copy in black or taupe for legibility.

03 / STOREFRONT EXPERIENCE

An editorial entry. A familiar path.

The home page introduces the season, then moves from a small new-arrival edit into category discovery and a broader product grid. A story section gives the concept a human point of view; a restrained newsletter sign-up and service links close the page.

PAGE / MOMENT	PURPOSE	KEY CONTENT
Home	Introduce the brand and lead into shopping	Season edit, new arrivals, categories, story
Collection	Help shoppers narrow the edit	Category filters and consistent product cards
Product detail	Support an informed choice	Image, price, color, size, description, add to bag
Bag	Make the selection easy to review	Line items, remove action and subtotal
Checkout handoff	Explain the next step honestly	Demo notice; live WooCommerce connection required

Primary journey

Home → collection → product detail → choose options → bag → checkout. Clear headings, persistent bag count, price visibility and mobile-first controls reduce guesswork at each step. The current prototype does not charge a payment method, calculate shipping or submit an order.

04 / FUNCTION & BUILD PLAN

A useful prototype, ready to extend.

The static storefront demonstrates the visual system and front-end interactions. A production WordPress build would map those patterns to a maintainable theme and WooCommerce data, preserving the platform’s native stock, variation, cart and order rules.

AREA	PROTOTYPE NOW	PRODUCTION IMPLEMENTATION
Brand UI	Responsive editorial storefront	Reusable WordPress theme templates and design tokens
Catalogue	Eight sample product cards and category filters	Real catalogue, taxonomies, attributes, SKU and stock
Product detail	Quick view, options and add-to-bag interaction	WooCommerce variable product with validated availability
Bag	Browser-local demo bag and subtotal	WooCommerce session cart, shipping and tax rules
Checkout	Clear prototype notice	Gateway, HTTPS, validation, order confirmation and emails
Newsletter	Consent-free visual form demo	Configured provider, consent copy and privacy handling

Suggested technical stack

CMS / commerce WordPress + WooCommerce
Theme layer Custom block theme or child theme; PHP templates and theme.json tokens
Front end HTML, CSS and JavaScript; progressive enhancement and responsive layouts
Data WooCommerce product, attribute, stock, order and customer models on MySQL
Operations Managed hosting, HTTPS, updates, backups, transactional email and a supported payment gateway

For the portfolio, label code as a static visual prototype unless a WordPress instance and the listed commerce paths have actually been configured.

05 / RESPONSIVE DESIGN & ACCESSIBILITY

Quiet on desktop. Clear on mobile.

The layout is designed to adapt from a wide editorial header and four-column product grid to a compact menu and two-column grid. Product detail, bag and navigation controls have explicit labels; imagery includes descriptive alt text; the palette reserves contrast for functional text and actions.

VIEWPORT	LAYOUT BEHAVIOR	REVIEW POINTS
Wide desktop 1280+	Full navigation, four product columns, split editorial story	Visual balance, image crop, long product names
Tablet 621–850	Condensed navigation and fluid card widths	No overlap at intermediate widths
Mobile up to 620	Menu toggle, two product columns, stacked story and forms	Touch target size, horizontal overflow, dialog scrolling

Accessibility checks before launch

- Keyboard reachability and visible focus for every interactive control.
- Dialog focus entry, Escape dismissal and focus return; announce bag changes to assistive technology.
- WCAG contrast checks for taupe text, gold hover states and labels on imagery.
- Respect reduced-motion preference and avoid conveying product availability by color alone.
- Validate semantic headings, form labels, error messages and zoom at 200%.

The prototype is a visual starting point. Accessibility conformance must be verified against the final theme, content, plugins and checkout.

06 / DELIVERY PROCESS & QA

Build with evidence at every step.

PHASE	WORK	OUTPUT
01 Discovery	Confirm audience, catalogue, fulfilment rules and brand references	Approved scope and site map
02 Design	Establish tokens, page hierarchy, responsive patterns and product photography	Screen designs and interaction states
03 Build	Implement theme, WooCommerce products, variation rules and templates	Working staging store
04 Verify	Exercise responsive, commerce, accessibility, performance and SEO checks	QA record and defect fixes
05 Launch	Harden access, configure payments, backups, email and monitoring	Release checklist and recovery path

Pre-launch QA checklist

CHECK	PASS CONDITION	EVIDENCE TO SAVE
Responsive pages	Home, collection, product, bag and checkout work at target sizes	Viewport captures and issue log
Variation & stock	Each size/color combination shows correct price and availability	Test product matrix
Bag totals	Add/remove/update recalculates items, shipping, tax and total	Cart test record
Checkout	Required-field, address, payment success/failure and cancellation paths behave correctly	Gateway test-mode order IDs
Order operations	Correct customer, line items, status and email are recorded	Redacted order/admin screenshots
Accessibility	Keyboard, screen reader basics, contrast, labels and error states reviewed	Audit notes and fixes
Performance & SEO	Measure representative pages; inspect metadata, sitemap and indexability	Named tool, date, URL and result
Security & recovery	HTTPS, least privilege, updates, backup and restore tested	Configuration and restore record

Record results with the test date, device/browser, method and observed value. Do not substitute expected outcomes for measured results.

07 / PORTFOLIO HANDOFF

Describe the work honestly.

This case study is ready to accompany the visual prototype. When the project is implemented in WordPress, replace concept language with the verified work, capture real screens, and add only measured results.

Portfolio title

AUREFASH — Premium Fashion E-commerce Store Concept

Short description

Designed a premium fashion storefront concept for WordPress and WooCommerce, with a custom visual identity, responsive editorial homepage and a clear product discovery and shopping journey. The prototype demonstrates category filtering, product quick views and a browser-local bag.

Suggested project facts

FIELD	PORTFOLIO COPY
Role	WordPress & WooCommerce Developer (update to match your actual contribution)
Project type	Independent portfolio concept
Status	Responsive front-end prototype; WooCommerce integration pending
Tools	HTML, CSS, JavaScript prototype; planned WordPress + WooCommerce
Verified result	Add only after implementation and documented testing

Screenshots to capture after build

- Homepage at desktop and mobile widths.
- Collection grid with a category filter active.
- Product page with a real variable product and availability state.
- Bag and the configured checkout test flow; redact all customer data.

Replace placeholder photography with licensed images. Add a working demo link only after deploying a stable staging or production site. Never publish test customer information, invented reviews, unverified sales claims or performance percentages.

AUREFASH

Modern essentials. Quiet confidence.
